Rolling Panel System

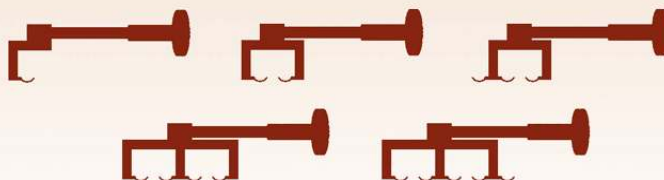

With linen and silk as the medium, the Rolling System at Sun Decor Fabrics brings modern art to window treatments. The patented Rolling carriage allows for unobstructed movement of the segmented fabric panels despite support bracket placement.

Each panel fabric segment is hemmed on the top and the bottom for connector rods to maintain their position on flanking uprights. Panels may have up to five segments with varying heights and varying spaces between them.

The system's hardware is produced in stainless steel with one to five rods in a single installation. The maximum single panel measurement is 43 3/8 wide by 157 1/2 high inches. Systems are available with left, right, or center opening batons. Besides windows, the Rolling Panel System can be used as an opening room divider.

One to five rod systems may be ceiling or wall mounted.
